EDUCATION

Brooklyn College, CUNY

Bachelor of Science, Computer Science (Transfer)

Brooklyn, NY

Fall 2027

Borough of Manhattan Community College, CUNY

Associate in Applied Science, Computer Science | GPA: 3.6

Manhattan, NY

Fall 2025

EXPERIENCE

Todd Agriscience

Software Engineer Intern

Remote

June 2026 – Aug 2026

- Shipped a **search feature with AI-powered suggestions** for the farm data platform, enabling staff to navigate notes and farm records significantly faster without manual scrolling.
- Contributing to an **MCP server** that connects **Claude** to live farm databases, enabling staff to query agricultural records and get AI-powered insights through natural language.

Cambio Labs

Software Engineer Intern

Remote

Feb 2026 – May 2026

- Improved and extended a **drag-and-drop Course Builder** used by real instructors, delivering new features and bug fixes that cut setup time **40%**.
- Proposed** and owned a **mentor onboarding system** end-to-end, greenlit by my manager, replacing a manual Google Form with automated provisioning, admin review, and email notifications with **zero manual handoff**.
- Identified a workflow gap and proposed a **role-impersonation tool** enabling admins to securely debug live user accounts with short-lived tokens and authorization guards, cutting resolution time **3x**.

LinkedIn | Winter Internship

Software Engineer Intern

Hybrid

Jan 2026

- Built an **AI-powered video clipping tool** for the LinkedIn Events team, enabling creators to auto-generate shareable highlights from live video replays – delivered a working **prototype** in **4 weeks**.
- Cut latency **5x** from **5 min to under 60 sec** by designing a **Redis-backed cache** that eliminated redundant LLM API calls, boosting throughput **75%**.
- Refined **prompt engineering** across multiple feedback cycles with my mentor, improving output quality to better match real creator workflows.

PROJECTS

Free Form Code | TypeScript, React, PostgreSQL, Redis, BullMQ, Socket.io, Docker, Kubernetes, AWS

Mar 2026

- Built a multiplayer **real-time collaborative code execution** canvas, isolating concurrent jobs via Socket.IO, BullMQ, and a sandboxed Node vm with JWT auth, timeout enforcement, and rate limiting.
- Containerized all four services with **Docker** and orchestrated deployments on a **Kubernetes** cluster – managing Deployments, Services, ConfigMaps, Secrets, and Ingress to achieve **zero-downtime rollouts** with container images stored in **AWS ECR**.
- Enforced code quality via a **GitHub Actions CI pipeline** running type checks, integration tests against live PostgreSQL and Redis containers, and Docker image builds on every push.

Dispatch | Go, Redis

2026

- Built **Dispatch**, a Redis-backed job queue in Go – engineered for **concurrent, fault-tolerant execution** via goroutines, **exponential backoff** retry logic, and a dead-letter queue for failed job inspection and replay.
- Designed a **delayed job scheduler** using Redis sorted sets scored by Unix fire-time, polling every second to promote ready jobs to the main queue and ensuring **job durability** across restarts.

Split-Tab | JavaScript, React, Node.js, Sequelize, PostgreSQL, PayPal API, Auth0

Aug 2025

- Built a **receipt-based bill splitting app** – users upload a receipt, **Tesseract.js OCR** itemizes it automatically, assigns line items per person, and triggers individual **PayPal checkout links** via a single shared link, no account required for guests.
- Prevented data corruption across 5 relational tables by wrapping all writes in **Sequelize transactions** with automatic rollback – ensuring no partial payments or mismatched splits ever reached the database.
- Reduced the full split flow from **4 manual steps to a single shared link**, removing friction for guests with no account required.

ACTIVITIES & AWARDS

1st Place, Finance Track – HackKnight 2025 (**230+ participants**) | **1st Place, Shopify Track** – NYC Hackathon 2026, YCoffee | **Open-Source Contributor** – Hacktoberfest 2025, Mozilla | **CS Club, BMCC** – Mentored members and recruited new programmers

TECHNICAL SKILLS

Languages: Go, TypeScript, JavaScript, Python, Java, C++, SQL

Backend & Systems: Node.js, NestJS, Express, GraphQL, REST APIs, OAuth 2.0, Socket.io, BullMQ

Databases: PostgreSQL, Redis

Cloud & DevOps: AWS (S3, ECS, Fargate, ECR), Docker, Kubernetes, GitHub Actions, CI/CD Pipelines, Git

Frontend: React, Next.js, TypeScript, MUI
